

TimeOut Grammar™

Remember when spelling checkers were considered inconvenient? Well . . . they were inconvenient. But now all word processors have built-in spell checkers, and everyone uses them. It's been the same with grammar checkers. Until now. New TimeOut Grammar adds built-in grammar checking to your AppleWorks word processing. With TimeOut Grammar, you got the power to guard your writing against embarrassing errors. No matter what you write, from a high-school paper to an annual report, TimeOut Grammar will make it stronger, clearer and more concise.

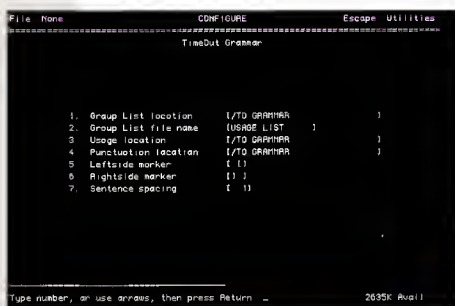

TimeOut Grammar™

TimeOut Grammar is easy to use. When it detects a writing error, such as a nonn-verb disagreement, it highlights the offending phrase, explains the error, and suggests a better way to say the same thing. You have the option to accept the suggestion, ignore it, or rewrite the phrase in a different way. It's your writing, and your style—only better and more readable.

When you're done checking your writing, TimeOut Grammar automatically saves the changes so that document comes out polished and ready to be printed.

End the hassle of quitting AppleWorks to check your writing in a standalone writing checker. Get built-in grammar checking with TimeOut Grammar.
